

Compact Fluorescent Lamps

Westinghouse compact fluorescent lamps are an alternative to incandescent lighting. These economical and long-lasting lamps are available in a variety of wattages and familiar shapes. The increasing importance of energy efficiency in today's economy has inspired Westinghouse to create CFL lamps with even longer life, more compact dimensions, higher CRIs and increased lumens. Westinghouse CFL lamps last up to ten times longer than standard incandescent lamps and consume 75% less energy.

Now there is a CFL for every general illumination application. Make the switch today and receive the same warm, soothing color as standard incandescent lamps while saving time, money and energy.

Compact Fluorescent Lamps

Westinghouse Compact Fluorescent Lamps — The Smart Choice in Fluorescent Lighting

Westinghouse compact fluorescent lamps are available in a variety of colors ranging from 2700K to 6500K. Their excellent color rendering of up to 84 CRI enhances colors and quality of light. CFL lamps are designed for long life and last from 6,000 to 10,000 hours, eliminating the need for frequent replacement. Their long life makes them ideal for hard-to-reach applications, such as security lights, track lighting, and recessed lighting.

What is ENERGY STAR®?

The ENERGY STAR® label stands for superior energy performance. ENERGY STAR® was first introduced by the U.S. Environmental Protection Agency in 1992 as a voluntary labeling program designed to identify and promote energy efficient products that reduce carbon dioxide emissions. Today, the ENERGY STAR® label has grown in popularity with consumers and is now found on a wide array of products, ranging from computers to home insulation. Many small and large businesses throughout the country actively support ENERGY STAR® products. In addition to the energy savings and environmental benefits, the ENERGY STAR® program provides goodwill to customers, employees, and local communities.

ENERGY STAR® is Gaining Awareness!

The Environmental Protection Agency awarded Westinghouse a 2003 ENERGY STAR® award for educating Americans about the importance of reducing greenhouse gas emissions through energy-efficient lighting.

- Nationwide, 41% of households report having seen the ENERGY STAR® label on products.
- Over 50% of households have a general understanding of the label's message, and of that group, 37% register a high understanding.
- 50% of households who reported buying an ENERGY STAR® qualifying product said they were favorably influenced by the ENERGY STAR® label.

Westinghouse is an ENERGY STAR® Manufacturing Partner

As a manufacturer of ENERGY STAR® labeled lamps, Westinghouse encourages every U.S. household to make sure their next lamp is ENERGY STAR® approved. If every U.S. household in the United States changed one light bulb in their home to ENERGY STAR®:

- We would save 857 billion kWh of energy and keep one trillion pounds of greenhouse gases out of the air.
- Our annual energy savings alone would be equivalent to the annual output of more than 21 power plants.
- Our annual savings could power more than 4 million U.S. homes for one year.

Westinghouse is committed to providing consumers with products that have earned the ENERGY STAR® label in order to protect the environment while saving energy and money.
